

SmartNitrogen

Controlled Release Fertilizer

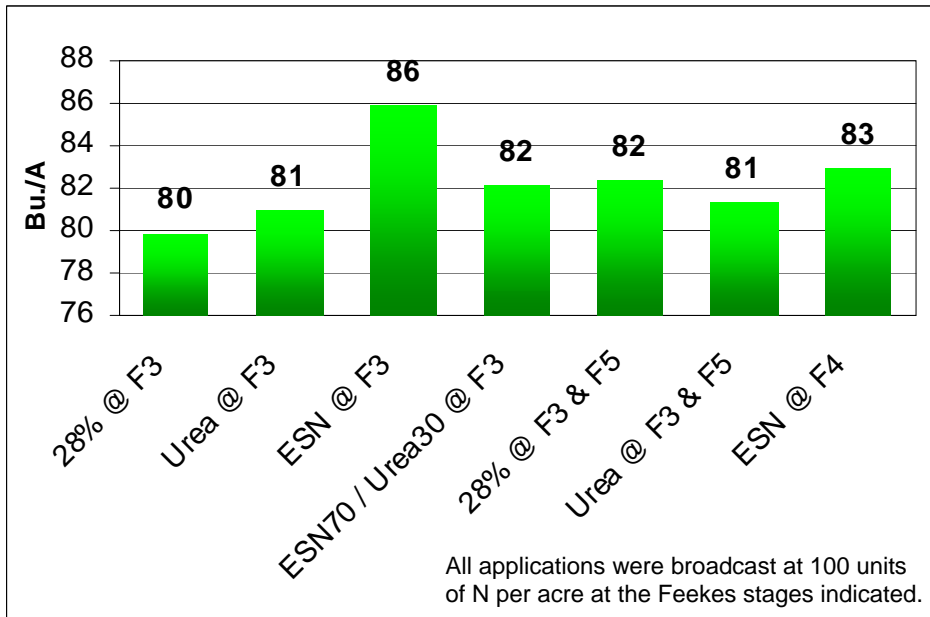

A *smarter* source of nitrogen.
A *smarter* way to grow.

Facts from the Field

ESN Advantages on Winter Wheat

Replicated research, conducted by Beck's Superior Hybrids, was conducted on different management strategies for nitrogen applied on winter wheat. The trials were conducted in Southern Indiana near Evansville. Beck's conducts these types of trials as a part of their PFR Practical Farm Research® studies at two locations in Indiana and one in Illinois.

In the latitudes of Southern Indiana and Illinois, Kentucky and Tennessee, ESN is recommended for mid-winter and early spring application. In some cases, a blend of ESN with a more soluble nitrogen is beneficial and can enhance early season tillering benefiting yield.

ESN is a proprietary polymer-coated controlled-release nitrogen fertilizer for agricultural crops. It works on all major nitrogen loss mechanisms – ammonia volatilization, nitrate leaching, and denitrification.

ESN's innovative polymer coating synchronizes nitrogen release with crop demand – providing plants with nitrogen when they need it most.

ESN – a one-time application for your season's growing needs.

How can we help?

To make ESN a part of your spring nitrogen program, contact an authorized retailer or Agrium representative. For technical information, our agronomists can be reached during business hours.

Agrium Advanced Technologies

Cedar Rapids, Iowa
