

Methylene Urea Nitrogen Fertilizer

Premium Slow-Release Feeding For Premium-Quality Turfgrass.

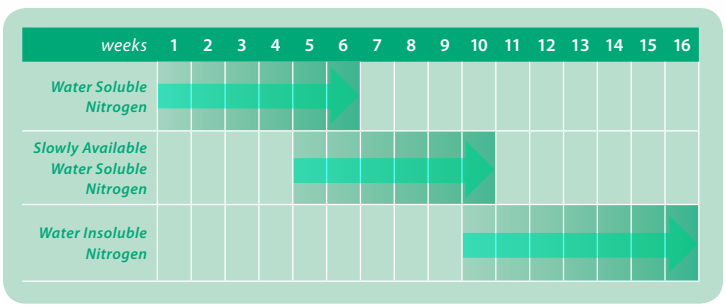

NUTRALENE® Slow-Release Fertilizer 40-0-0 from Agrium Advanced Technologies is a premium, slow-release nitrogen/methylene urea fertilizer that's trusted by countless turfgrass professionals for dependable, long-lasting performance. NUTRALENE gradually feeds turfgrass for up to 16 weeks, slowly and evenly—typically by releasing one-third of its nutrients in the first four to six weeks, another one-third in five to 10 weeks, and the remainder during weeks 10 to 16. Premium release with that longevity allows you to effectively nourish your turf throughout the season with fewer applications.

Unique Double-Action Performance.

While slowly releasing its 35% water-insoluble nitrogen (WIN), NUTRALENE also enriches your soil's microbiology, which helps to increase root growth and density and improve the overall health of your turfgrass. Because NUTRALENE's release is triggered by temperature and microbial activity in unison with plant demand, you're assured of highly efficient feeding. In addition to providing reliable sustained release, NUTRALENE avoids the "peaks and valleys" caused by inconsistent products.

Add More Flexibility To Your Fertility.

Premium-grade NUTRALENE can be used under a broad range of environmental conditions at any time of the year. NUTRALENE also offers you a choice of three sizes, so you're given the maximum range in rate flexibility, from one-third lb. N/1000 square feet up to 3 lb. N/1000 square feet. Whichever NUTRALENE you choose, be assured that the granules will go where they're intended to—and help maximize nutrient efficiency during application—thanks to our optimum particle sizing.

Premium Quality From Start To Finish.

Agrium Advanced Technologies uses only the highest-grade urea for NUTRALENE, and then each and every batch undergoes our intensive quality assurance program to ensure accurate analyses. Agrium Advanced Technologies vigorously protects the integrity of NUTRALENE, because if you're going to demand top-level turfgrass, you have to be able to count on a top-quality fertilizer.

Methylene Urea Nitrogen Fertilizer

Get NUTRALENE® And Get More Control.

When you want a fertilizer with better nutrient release—one that lets you determine and maintain the amounts of nitrogen your turf receives—make the premium-grade choice that so many professionals do: NUTRALENE.

- High-quality, 35% water-insoluble nitrogen
- Gradual, even feeding for up to 16 weeks
- Increased microbial activity in the soil
- Season-long feeding for fewer applications
- Optimum particle sizing for efficient application
- Low salt index of 25
- Less risk of nitrate leaching or run off
